Poker Hand Rankings

Best to worst

#	Hand	Odds (5 cards)
1	 **Royal Flush** A, K, Q, J and 10, all of the same suit. The best hand possible.	1 in 649,740
2	 **Straight Flush** Five cards in a row, all of the same suit.	1 in 72,193
3	 **Four of a Kind** Four cards of the same value, also called "quads", plus any fifth card.	1 in 4,165
4	 **Full House** Three cards of one value plus two cards of another.	1 in 694
5	 **Flush** Any five cards of the same suit, not in a row.	1 in 509
6	 **Straight** Five cards in a row, of mixed suits. The ace can be high (10-J-Q-K-A) or low (A-2-3-4-5).	1 in 255
7	 **Three of a Kind** Three cards of the same value, also called "trips", plus two unrelated cards.	1 in 47
8	 **Two Pair** Two cards of one value, two cards of another value, plus one extra card.	1 in 21
9	 **Pair** Two cards of the same value plus three unrelated cards.	1 in 2.4
10	 **High Card** None of the above. The hand is valued by its highest card.	1 in 2

Texas Hold'em in 5 steps

1. Everyone gets 2 private cards.
2. Bet. Then 3 shared cards (flop), bet, 1 card (turn), bet, 1 card (river), bet.
3. Make your best 5-card hand from your 2 cards + the 5 shared ones.
4. Best hand at the end wins the pot, or the last player who didn't fold.
5. Same hand? Higher cards (kickers) decide. Suits never matter.
